## **Belt Conveyor Overview**

Overview / F	eatures		Drive Module Position		
	Belt		End Drive	Center Drive	Built-In Drive
Number of Track (s)			Tension adjustment is easy because the non- driven tail roller also acts as a tension roller. Low cost due to small number of parts used.	Tension can be adjusted at the center drive	The built-in motor between frames ha
Single Track Broader carrying surface can convey various shapes of work pieces.	Flat Belt  Belt type is selectable from above right for your application.	Standard Width (50mm Increment)	Del Culo halab	Del Cada Malain	
			P.1061, 1062	P.1063, 1064	P.1084
		Configurable Width (10mm Increment)	TO CONTROL	Property and the second	
			P.1065, 1066	P.1067, 1068	
		Heavy Duty Type Up to 90W motors are applicable.	THE CONTRACTOR OF THE CONTRACT	Para Salari

		Full Belt Width Type  Belt Width ≈ Frame Width Type.	Ed Guida Angalo		
		Tridai Typo:	P.1079, 1080		
		Short Type  Short Unit Type suitable for "Conveyor to Conveyor" transfers.		and the said	
				P.1083	
	Stainless Steel Belt Type  Excellent in flatness, heat resistance and electrical conductance. Suitable for optical inspection, sterilization intended transfers and LCD panel		(2)		
	display conveyance.		P.1085		
	Narrow Type  A slim width conveyor. Suitable for intra equipment applications and small parts transfers.				
			P.1081	P.1082	
Dual Track Since there is a gap between the tracks, stoppers and sensors can be mounted. Two track synchronous conveyance is possible by the use of Timing Belt or Plastic Chain.	Timing Belt Type  Double-sided fabric lined type suitable for accumulating conveyance.				
			P.1087, 1088	P.1089, 1090	
	Plastic Chain Type  Engineering Plastic Block Chain is used. Less prone to scratches and easy to maintain.
